Introduction

The NSQAP Quality Control (QC) dried blood spot (DBS) materials provide participants with external controls to assess method performance over time. The controls provide continuity and transcend changes in production lots of routinely used method- or kit-control materials. The external QC materials are intended to supplement the participants' method- or kit-control materials at periodic intervals to allow participants to monitor the long-term stability of their assays. NSQAP QC material is not a replacement for manufacturer kit controls or other daily QC and should not be used for routine analysis. This report contains a summary of the 2025 Set 1 QC data reported by state, contract, and private laboratories in the United States; international participants; and manufacturers of screening test products.

QC Material Production

NSQAP provided 6-month supplies of DBS QC materials. DBS QC lots were prepared from whole blood of 50% hematocrit. The materials were enriched with predetermined quantities of selected analytes and dispensed in 100 µL aliquots on Grade 903 filter paper (Cytiva (Cardiff, United Kingdom)).

NSQAP provides single-analyte QC materials for thyroxine (T4), thyroid-stimulating hormone (TSH), galactose-1-phosphate uridylyltransferase (GALT), and immunoreactive trypsinogen (IRT). 17 α-hydroxyprogesterone (17OHP) and total galactose (TGal) are combined in one QC panel, 17OHPQC and TGALQC.

The Tandem Mass Spectrometry 1st Tier QC (MSMS1QC) includes enrichments for twenty acylcarnitines, ten amino acids, four markers of X-linked adrenoleukodystrophy (ALD), two markers of adenosine deaminase deficiency severe combined immunodeficiency (ADA-SCID), and four other markers of metabolic disorders.

- **Acylcarnitines:** free carnitine (C0), acetylcarnitine (C2), propionylcarnitine (C3), malonylcarnitine (C3DC), butyrylcarnitine (C4), hydroxybutyrylcarnitine (C4OH), isovalerylcarnitine (C5), tiglylcarnitine (C5:1), glutarylcarnitine (C5DC), hydroxyisovalerylcarnitine (C5OH), hexanoylcarnitine (C6), octanoylcarnitine (C8), decanoylcarnitine (C10), dodecanoylcarnitine (C12), myristoylcarnitine (C14), tetradecenoylcarnitine (C14:1), palmitoylcarnitine (C16), hydroxypalmitoylcarnitine (C16OH), stearoylcarnitine (C18), and hydroxystearoylcarnitine (C18OH)
- **Amino acids:** alanine (Ala), arginine (Arg), citrulline (Cit), glycine (Gly), leucine (Leu), methionine (Met), ornithine (Orn), phenylalanine (Phe), tyrosine (Tyr), and valine (Val)
- **ALD:** 20:0- 22:0- 24:0- and 26:0-lysophosphatidylcholine (20, 22, 24, and 26-LPC)
- **ADA-SCID:** adenosine (Ado) and deoxyadenosine (dAdo)

- *Other MSMS1QC analytes*: creatine (CRE), guanidinoacetic acid (GUAC), creatinine (CRN), and succinylacetone (SUAC)

We provided QC materials for six enzymes used in the detection of lysosomal storage disorders (LSD): galactocerebrosidase (GALC), acid α -glucosidase (GAA), α -L-iduronidase (IDUA), α -galactosidase (GLA), β -glucocerebrosidase (ABG), and acid sphingomyelinase (ASM).

NSQAP also distributed certified QC materials for newborn screening analytes and disorders designed for second-tier testing by liquid chromatography with tandem mass spectrometry (LC-MS/MS).

- *Second-tier Congenital Adrenal Hyperplasia (CAHQC)*: 17 α -hydroxyprogesterone (17OHP2), 4-androstenedione (4AD2), cortisol (CORT2), 11-deoxycortisol (11D2), and 21-deoxycortisol (21D2)
- *Second-tier Maple Syrup Urine Disease and Phenylketonuria (MSUD-PKUQC)*: alloisoleucine (ALE2), isoleucine (Ile2), leucine (Leu2), phenylalanine (Phe2), tyrosine (Tyr2), and valine (Val2)
- *Second-tier Methylmalonic/Propionic Acidemia and Homocystinuria (MMA-tHCY)*: malonic acid (MA2), methylmalonic acid (MMA2), ethylmalonic acid (EMA2), 2-methylcitric acid (MCA2), and total homocysteine (tHCY2)

QC Material Distribution

On January 14, 2025, NSQAP distributed DBS quality control (QC) materials to 507 participating laboratories.

QC Data Reporting Requirements

Participants used the NSQAP Participant Portal at <https://nbs.dynamics365portals.us/> to report results. Required input for QC data reporting included the following: 1) analyte kit or method, 2) results of duplicate sample analysis from five independent runs in the analytic units and decimal places requested, and 3) ten data points for each lot and analyte.

Participant Results

For the Set 1 QC materials, we compiled the participant results from five analytic runs from each QC lot and calculated mean values and standard deviations (SD). NSQAP removed data values considered to be “blunders.” For statistical analysis, we could not include qualitative data, data submitted in unidentified units, or data from less than five analytic runs per specimen lot per analyte.

Participants must report results in requested units of measure. For GALT analysis, where no conversion factor exists between units of U/g Hb and other reportable units, we included a separate table to provide participants with peer-group statistics.

Tables on pages 4 – 71 summarize reported QC data. Each analyte summary table provides the following:

- Analyte name, analyte abbreviation, and reportable units of measure
- Method – The reported method
- Number of labs – Total number of laboratories reporting results for a given lot level within a specified method group
 - Note: methods with less than five laboratories reporting data were not included
- Total N – Total number of data points reported by laboratories for a given lot within a specified method group, minus any outliers removed
- Total mean – Average results reported by laboratories for a given lot within the specified method
- Total SD – Standard deviation of results reported by laboratories for a given lot within the specified method
- Intralaboratory SD – Average within-laboratory standard deviation of data points reported by laboratories for a given lot within the specified method
- Interlaboratory SD – Between-laboratory standard deviation of data points reported by laboratories for a given lot within the specified method
